

FINANCIAL PRIVACY FOR ALL

Monero is the secure, private and untraceable currency freely accessible to all. Free from centralized institutions and capital controls, with Monero you have the power and liberty to control your finances without worrying about intermediaries that might censor you or profit off your transaction data.

Currencies that use a transparent blockchain can bring many inconveniences. Local commerce might have sensible financial data exposed, damaging their negotiation position. Private citizens can easily have all their funds exposed, which poses a real threat to physical safety and financial freedom. Merchants are at risk of accepting known "tainted" funds, which introduces significant liability.

Monero solves these problems and protects you with an anonymity set that exceeds any other currency today.

We encourage you to take a few minutes to learn about Monero in this pamphlet. »
